Research

Work in progress

Bank Credit Supply and Entrepreneurship, with Tobias Renkin and Filip Rozsypal

We study how bank credit supply at founding affects firm entry and performance. We match credit supply shocks at Danish banks to potential entrepreneurs through their pre-existing personal banking relationship. A one standard deviation increase in credit supply raises the rate at which individuals start firms by 3%. Firms founded under higher credit supply end up significantly larger one decade after entry.

Publications

Sovereign Debt and Fiscal Integration in the European Union, with Zsolt Darvas and Jeromin Zettelmeyer (2025), *Journal of Economic Perspectives*

Demographic change will hit public debt sustainability in European Union countries, with Zsolt Darvas and Jeromin Zettelmeyer (2025), *Journal of Policy Modeling*
